Gameplay Programmer | Backend Engineer

DOB – 25/06/2003 | Citizenship – India | Iqama – Transferable | Driving License – Available

PROFESSIONAL SUMMARY

Computer Science engineer with experience in gameplay programming and backend development. Skilled in Unity (C#) for implementing gameplay systems, mechanics, and mobile game prototypes while also building scalable backend systems using Java and Python. Experienced in modular gameplay architecture, debugging gameplay systems, performance optimization, and rapid prototyping.

EXPERIENCE

Gameplay Programmer

Aurelio Game Studio

Dec 2025 – Present

Remote

- Develop gameplay systems for a mobile endless runner using Unity and C#, including player movement, obstacle spawning, scoring mechanics, and UI interactions.
- Collaborate with designers and artists to iterate rapidly on gameplay prototypes and refine gameplay mechanics, pacing, and difficulty balancing.
- Structure modular gameplay scripts and reusable systems to improve maintainability and runtime performance.
- Debug gameplay systems, physics interactions, and gameplay loops using Unity debugging and profiling tools.
- Released a complete endless runner mobile game on Android built using Unity and C#.

Backend Support Engineer

MINE

Apr 2025 – Present

Remote / USA

- Designed and tested 20+ Spring Boot REST APIs with strong validation, response consistency, and error handling.
- Debugged recurring backend issues using logs, stack traces, and API response analysis.
- Collaborated with frontend developers to refine API contracts and resolve integration issues.
- Developed automated API testing scripts improving regression testing coverage.
- Built an internal quiz generator service using Java and Groq APIs to automate content transformation.

EDUCATION

VIT Vellore (Vellore Institute of Technology)

Bachelor of Technology in Computer Science and Engineering

2021 – 2025

Vellore, India

PROJECTS

Endless Runner Mobile Game | Unity, C#

2025 – Present

- Designed and implemented a hybrid casual endless runner game using Unity and C#.
- Implemented player movement systems, obstacle spawning logic, scoring mechanics, and gameplay state management.
- Built modular gameplay architecture allowing rapid iteration and gameplay balancing.
- Released the game on Android following production approval.

Smart Search POC | Java, Spring Boot

2026

- Developed an AI powered search proof of concept using hybrid ranking algorithms and editorial alignment scoring.
- Implemented filtering guardrails using multi factor scoring and content prioritization logic.

Youtube Shorts Uploader | Python

2026

- Built an automated pipeline for short form video generation integrating LLM scripts, image generation, voice synthesis, and FFmpeg assembly.
- Implemented job tracking, automated retries, and scheduling for continuous content generation.

Crash Detection System | YOLOv8, OpenCV

2025

- Developed a crash detection pipeline achieving 97.5% accuracy using multi frame validation logic.
- Implemented automated emergency alert notifications using messaging APIs.

TECHNICAL SKILLS

Languages: C#, Java, Python, SQL, C/C++

Game Development: Unity Engine, Gameplay Systems, Mobile Game Development

Game Systems: Physics Systems, Gameplay Architecture, Debugging, Performance Optimization

Backend: Spring Boot, Node.js, REST APIs

Tools: Unity Editor, Git, Docker, Postman, IntelliJ, VS Code

Platforms: Android, AWS, GCP
